1 Structure and function

1.1 Use

Engine management system MDEC for stationary generator engines is used for engine series MTU/DDC Series 4000 and DDC/MTU Series 2000. Engine management system MDEC primarily fulfills the following tasks:

- Controlling the diesel engine
- Monitoring the operating states
- Regulating feeding or speed of the diesel engine (depending of the appropriate operating state)
- Indicating incorrect operating states via fault codes (PIM A 521)

TIM-ID: 0000063863 - 002

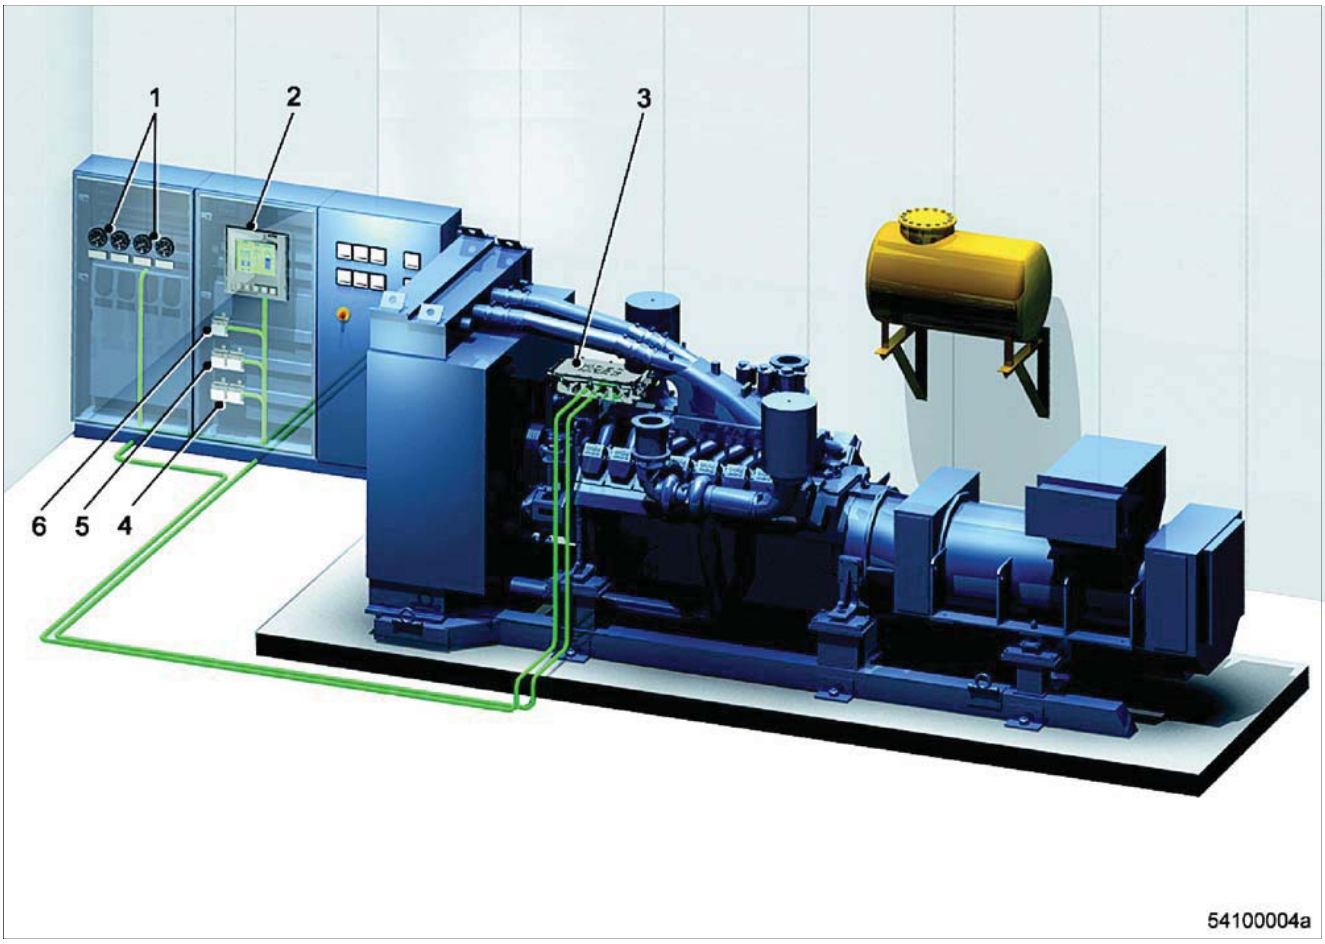

Fig. 1 : Engine management system MDEC for stationary generator engines for genset control and monitoring

Pos.	Designation	Meaning
1/1	Analog display instru-ments	–
1/2	LCD display	Monochrome PIM A 530
1/3	ECS-5	MDEC
1/4	Interface module	Indication of individual alarms PIM A 522....
1/5	Interface module	For measured value acquisition PIM A 529
1/6	Fault code module	PIM A 521

As many as 8 additional PIM Peripheral Interface Modules can be connected to superordinate systems (option). A display PIM A 530 (option) gives information about operating states in the form of bargraphs and text and signals malfunctions in the form of messages.
