

MTU Callosum_MC

Monitoring and Control System (MCS)

Page 1/3

The MTU Callosum_MC MCS monitors and controls the entire propulsion system, electric energy supply and general ship areas. MTU Callosum_MC is the centerpiece of MTU Callosum, expandable on a modular basis and tailored to customer-specific needs.

Benefits

Intelligence, integration, intuition

Adaptation for all marine applications

Effective and flexible adaptation to customer / ship requirements

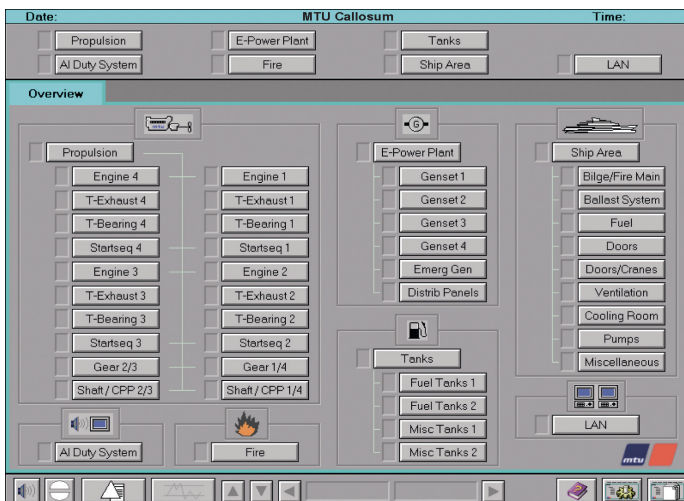

Easy and safe operation of all systems

State-of-the-art, reliable technology

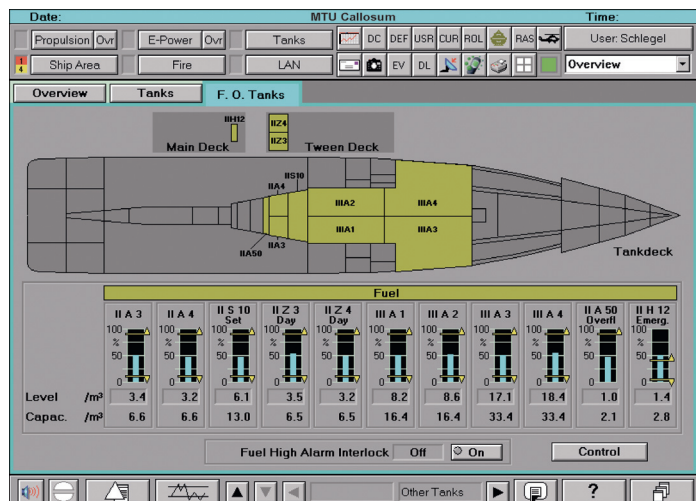

Ideal system platform for supplementary MTU Callosum_TS /
MTU Callosum_MT / MTU Callosum_DC packages

More than 45 years of experience in system technology

Visualization example: Operator station

Overview: The overview page displays the general structure of the on-screen pages according to the monitored measurements.

Ship area: Vital information for your security and support. The visualization system with its sub-directories is tailored to meet your requirements and suit the installations on any type of ship.

Power. Passion. Partnership.
