

MTU Callosum_MC

Duty Alarm System (DAS)

Page 1/2

The MTU Callosum_MC DAS is a standard system. It is an optional system and functions in conjunction with MTU Callosum_MC. The DAS forwards alarms from the Management Computer Unit (MCU) to different locations outside the engine room and the bridge to initiate optical und acoustic alerts. In this way it enables the duty crew to monitor the various rooms on the vessel e.g. the engine room.

Benefits

Direct handling per touch panel

DAS is fully integrated into MTU Callosum_MC

Multiple alarm stations at different locations throughout the vessel

Straightforward handling of panel functions

Clear warnings for fire alarms

Detailed overview of activated alarms on every monitor

Structure based on modern network technology (Ethernet) providing an overall reduction in cables and complexity

Duty alarm panel

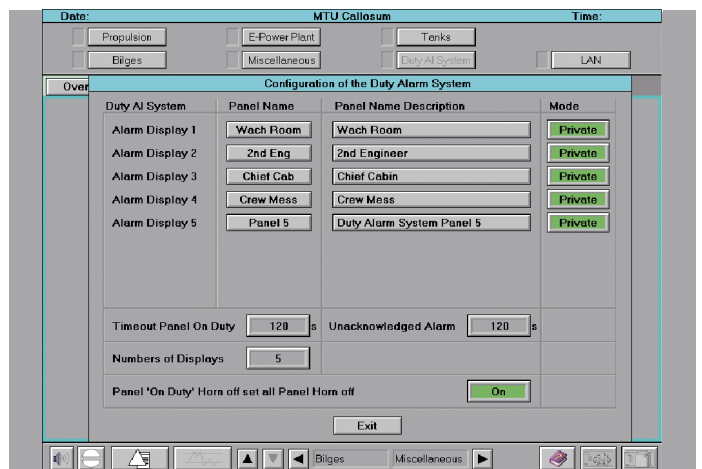

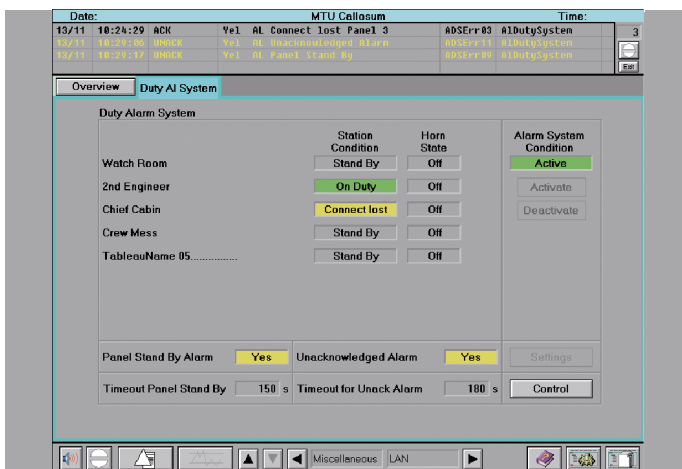

Switch

Controller
