

MTU Callosum_TS

On-Board Training System (OBTS)

Page 1/2

The MTU Callosum_TS OBTS facilitates instruction and further training of the crew during ship operation. The training system simulates real operating conditions because it is based on original images and intelligent models linked to the automation.

Benefits

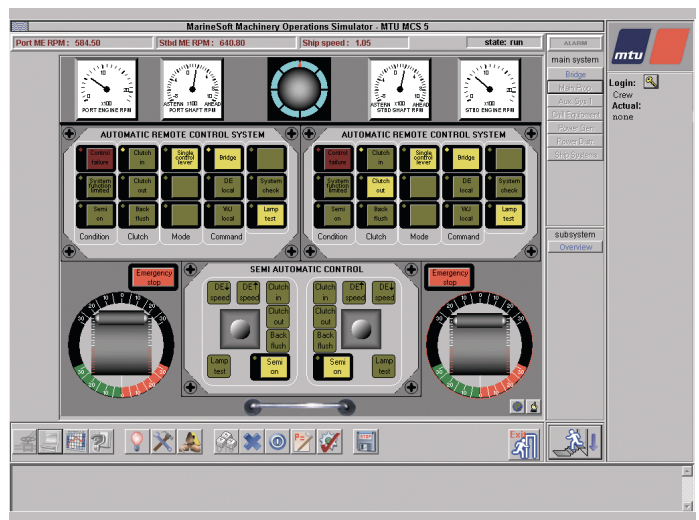

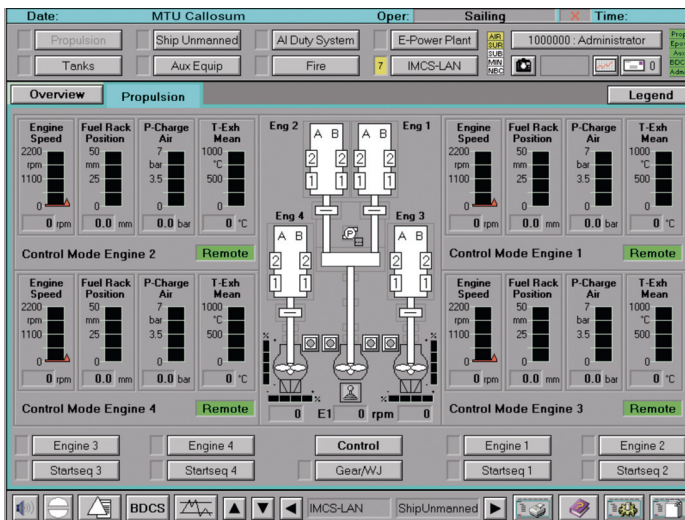

Soft- and hardware for operator and maintainer training

- Simulation-based training (demo, tutorial, training) for on-board familiarization and operation
- Simulation-based assessment

Implementation of the original MTU Monitoring and Control System

Trainees receive training in a quasi real surface environment

Visualization example: Operator station

Power. Passion. Partnership.
