SUBJECT: Crankshaft Grounding Device Released

INTRODUCTION

MTU/DDC has released a crankshaft grounding device as standard equipment on production Series 4000 engines used in construction and industrial applications. This improvement took place in production with engine serial numbers **S/N 5262001618** (12V), **S/N 5272001995** (16V) and order group **06C01L0001**.

DETAILS AND REASON

MTU/DDC has released a crankshaft grounding device to provide improved resistance to electrical erosion which may be caused by stray electrical current from the traction alternator. **P/N 5275590671** includes the assembled grounding device and hardware required for installation on the front of the engine.

GENERAL VIEW OF GROUNDING DEVICE
